

# Dowdeswell

# 125 Series MA

### Optional Equipment

- DD, DDS, SCN & Slatted Bodies
- Disc Coulter
- Knife Coulter
- Trashboards
- Furrow Splitters
- Subsoiler Blades
- Furrow Wideners
- Mouldboard Extensions

A plough designed to be simple, yet adaptable. Made for the farmer who has a known requirement of furrow width and quantity, but does not want to be tied to it.

A modular design incorporating a tried and tested Dowdeswell headstock and linkage arrangement to manage the front furrow width and beam alignment.

With manual furrow width adjustment of 14", 15" & 16" for use in the furrow behind tractors of up to 240hp.

### 125 Series Specifications

**MA  
Manual  
Adjustment**

Number of Furrows	Interbody Clearance	Furrow Width	Weight Kg	Retail Price
4 Furrow	36" (91 cm)	14" – 16"	1690	£15,700
5 Furrow	36" (91 cm)	14" – 16"	1850	£18,050
6 Furrow	36" (91 cm)	14" – 16"	2030	£20,400

Depth only wheel option	-£720
Non sequencing option	-£1250

Underbeam Clearance 29" (76 cm)

Note: All weights are approximate and include UCN bodies, skims and rear disc.

All New Dowdeswell 125 Series ploughs are covered by our comprehensive two-year warranty.

### Dowdeswell Demonstration Service

To be sure that you are choosing the right machine type and most suitable model for your land – ask for a demonstration on your own farm. Simply call 01926 812335 or contact your Dowdeswell Dealer.

# The Dowdeswell 125 Series Plough Range

A range of fully mounted, reversible ploughs with manual furrow width adjustment – suitable for tractors of up to 240hp working in the furrow.

**D**esigned to be a replacement for the DP7 & 120 Series plough range, the 125 Series keeps the simple functionality of the historic ploughs whilst instilling the adaptability of a modern Dowdeswell plough.

Dowdeswell's renowned quality engineering has been built into this plough range which, together with our two year warranty, offers outstanding value.

## Hydraulic Front Furrow & Mechanical Alignment

- A parallel sideshift allows easy, hydraulically operated, on-the-move adjustment of the front furrow width and simple hydraulic matching to the tractor wheel widths.
- Mechanical adjustment of the beam angle allows for simple setting of the plough alignment to ensure the tractor top link is true. Coupled to a hydraulic cylinder it allows the plough to close down the beam angle, turnover and reset the beam angle to its previous position, all on one spool movement.

## Cast Headstock

- Dowdeswell's 125 Series plough uses a high tensile cast steel headstock base for excellent durability, whilst allowing for category 2 and 3 attachment to the tractor.
- The turnover runs on low friction taper roller bearings to provide a smooth and consistent turnover.

## Easy Manual Adjustment

- Manual Adjustment (MA) models feature the proven Dowdeswell adjusting system, being easy and accurate, with no need to remove or replace bolts, re-positioning the mouldboard, skims and disc together.

## Depth Wheel

- Fitted as standard on the 125 Series is a combination depth/transport wheel. Taken from the 145 Series range it has a fully proven history.
- The depth/transport wheel assembly features spanner-less depth adjustment and a single pin operation from work into transport.

- The 125 Series can be specified with a depth only land wheel to reduce cost and features using a simple, reliable and proven damped turnover complete with individual adjustment of the right and left hand ploughing depths.
- A large tyre profile is provided as standard on either option to keep ploughing depths consistent.

## Shearbolt Protection

- All 125 Series shearbolt ploughs use the same leg, skim and disc from the 140 Series. Using a lightweight high strength fabrication of the leg bracket for durable performance.

## Spring-Reset Protection

- The proven Dowdeswell spring-reset system will be added to the 125 series plough range in the near future.
